Hill-Rom

Steriseal Ophthalmic Products

For more than 35 years the Steriseal® range of ophthalmic cannula have been designed, developed, manufactured and marketed to ophthalmic professionals worldwide. Regulatory compliant and manufactured to exacting GMP guidelines the cannula portfolio covers the following procedures:

- Cataract
- Oculoplastic
- Refractive
- Vitreoretinal

These products are available as single use sterile Steriseal branded items or, for kit packers, as non-sterile Steriseal branded items.

Anaesthesia

Retrobulbar

For administration of anaesthetic agents behind the eye globe.

1275 25G Retrobulbar
0.50 x 40mm (25G x 1 1/2")

1275A 26G Extra Long Retrobulbar
0.45 x 50mm (26G x 2")

1275G 25G Retrobulbar Curved (Uthoff)
0.50 x 28mm (25G x 1 1/8")

1637 25G Retrobulbar (Atkinson)
0.50 x 40mm (25G x 1 1/2")

1638 23G Retrobulbar (Atkinson)
0.64 x 40mm (23G x 1 1/2")

Peribulbar

For administration of anaesthetic agents around the eye globe. Ease of introduction and penetration allow predictable retro/peribulbar administration each time.

1641 23G Peribulbar
0.64 x 30mm (23G x 1 1/4")

1642 25G Peribulbar
0.50 x 30mm (25G x 1 1/4")

1642A 25G Peribulbar
0.50 x 22mm (25G x 7/8")

1642B 27G Peribulbar
0.40 x 25mm (27G x 1")

Anaesthesia

Sub-Tenon

For administering anaesthetic into the posterior sub-tenon space. Flattened rounded tip allows easy advancement whilst the curve permits movement around the contour of the globe.

1278 19G Sub-Tenon Cannula
1.05 x 15mm (19G x 1") Curved

1278J 19G Orbital Sub-Tenon Cannula
(Jacobs)
1.05 x 25mm (19G x 1") Curved

Regional Block

For Regional Block, infiltration of anaesthetic agents and subconjunctival injections.

1285 30G Facial Nerve Block
0.30 x 16mm (30G x 5/8")

Chamber Maintenance

Anterior Chamber

Used primarily to maintain and form the anterior chamber with Viscoelastic, BSS or air. This range of cannulas has been developed to allow the maintenance of anterior chamber depth during ophthalmic surgery. Not only can the Rycroft cannula be used for the introduction of viscoelastics, but it can also help keep the cornea moist.

1273 30G Anterior Chamber (Rycroft)
0.30 x 22mm (30G x 7/8")

1273A 27G Anterior Chamber (Rycroft)
0.40 x 22mm (27G x 7/8")

1273B 20G Anterior Chamber (Rycroft)
0.90 x 22mm (20G x 7/8")

1273C 30G Anterior Chamber (Sauter)
0.30 x 22mm (30G x 7/8")

1273L 20G Self Retaining Chamber
Maintainer (Lewicky)
1.6 x 150mm Tubing

1277 16G Anterior Chamber Washout
Cannula
1.60 x 25mm (16G x 1")

1277A 19G Bishop Harmon Cannula
1.05 x 25mm (19G x 1")

1639 25G Anterior Chamber (Rycroft)
0.50 x 25mm (25G x 1")

Viscoelastic

Viscoelastic cannula are designed for easier placement of viscoelastic material. Can also be used as an Irrigating Cannula.

1273G 27G V.E. Cannula

0.4 x 22mm (27G x 7/8")

Angled 35° 8mm from tip. For accurate placement of viscoelastic material to all areas of the anterior chamber.

1274 23G V.E. Cannula

0.64 x 22mm (23G x 7/8")

Angled 45°. For placement of V.E. material to all areas of the anterior chamber. Longer tip allows easier placement in the 10 - 2 o' clock meridian.

Also available in quantities of 250 - Aspen Code 1274A

Capsulotomy

Irrigating Cystotomes

Designed and used for capsulorhexis, plus intercapsular/endocapsular and the 'can opener' capsulotomy technique. Formed cystotomes are shaped to conform with the anterior convexity of the crystalline lens.

1602 25G Irrigating Cystotome Side-Cutting (Formed)

0.50mm

With purpose ground cutting edges for easier linear capsulotomy.

1610D 25G Irrigating Cystotome Short (Pearce)

0.50mm

Ideal for use in the intracapsular or letterbox capsulotomy procedure.

1610 25G Irrigating Cystotome (Formed)

0.50mm

1610F 25G Irrigating Capsulorhexis Cystotome

0.50mm

With 45° angled tip rotated 45° to facilitate smooth capsulorhexis procedures.

1610A 25G Irrigating Cystotome (Straight)

0.50mm

With a 90° cutting tip

1630 30G Irrigating Cystotome (Formed)

0.30mm

1610B 27G Irrigating Cystotome (Formed)

0.40mm

1646 25G Irrigating Cystotome Reverse Bend (Formed)

0.50mm

1610C 25G Irrigating Cystotome (Berlin)

0.50mm

Hydrodissection & Hydrodelineation

By the application of fluids Hydrodissection cannula separate cortex from the lens nucleus and capsule bag. Hydrodelineation cannula separate the layers of the nucleus for easier phacoemulsification.

1273D 27G Hydrodissection/V.E. Curved (Sauter)
 0.40 x 22mm (27G x 7/8")
 Has a vertically flattened end to allow exact placement of Viscoelastic material. May also be used for hydrodelineation.

1273E 27G Hydrodissection/V.E. Curved (Helsinki)
 0.40 x 22mm (27G x 7/8")
 Has a horizontally flattened end to allow exact placement of Viscoelastic material. May also be used for hydrodelineation.

1273F 25G Viscoexpression Cannula (Corydon)
 0.50 x 22mm (25G x 7/8")
 Has smooth J. shaped open ended tip for hydrodissection and viscoexpression of the nucleus.

1280 25G Nucleus Hydrodissector
 0.50 x 25mm (25G x 1")
 Angled 35° 8mm from end. Flattened tip allows smooth insertion under the anterior capsule for dissection of nucleus from cortex and capsule.

1280B 25G Hydrodissection Cannula (Jacobs)
 0.50 x 25mm (25G x 1")
 For Microincision Cataract Surgery (MICS).

1280C 27G Hydrodissection Cannula
 0.40 x 22mm (27G x 7/8")
 For Microincision Cataract Surgery (MICS).

1281 25G Hydrodelineation Cannula Tapered Tip (Curved)
 0.50 x 22mm (25G x 7/8")
 Tapered tip cannula (curved) for easy insertion under the capsule or into the nucleus for hydrodelineation. Taper length 3mm.

Irrigation/Aspiration

I/A System Simcoe Cannulae

1570 23/23G Simcoe I/A Cannula
Standard L.H. **Aspiration**

0.64/0.64mm

Standard Left Hand Aspiration through remote luer connection. 0.4mm port.

1572 23/23G Simcoe I/A Cannula
Reverse R.H. **Irrigation**

0.64/0.64mm

Right Hand reverse. Irrigation through remote luer connection. 0.4mm port. In line aspiration.

1571 23/23G Simcoe I/A Cannula
Standard R.H. **Aspiration**

0.64/0.64mm

Standard Right Hand Aspiration through remote luer connection. 0.4mm port.

1573 23/23G Simcoe I/A Cannula
Reverse L.H. **Irrigation**

0.64/0.64mm

Left Hand reverse. Irrigation through remote luer connection. 0.4mm port. In line aspiration.

Irrigation/Aspiration

I/A System Twin & Single Cannulae

The shorter tube on the twin cannulas provide the irrigating flow into the anterior chamber.
The longer cannula aspirates cortical debris via connection to a Pallin syringe.

1594 23G Aspirating Cannula
(Charleux)

0.6mm

A curved cannula designed to permit smooth easy aspiration of cortical debris.

1625 21G Single Aspirating Cannula
0.3mm Port

0.80mm

Has a 0.3mm port and is curved to facilitate aspiration in the area between 10 o'clock and 2 o'clock.

1611 21G I or A Cannula (Straight)

0.80mm

A smooth, open-ended cannula for irrigation or aspiration within the anterior chamber.

1625A 23G Single Aspirating Cannula
0.3mm Port

0.64mm

Has a 0.3mm side port and is curved to facilitate aspiration in the area between 10 o'clock and 2 o'clock.

Irrigation/Aspiration

Aspirating Handpieces

For bimanual irrigation and cortex aspiration after phacoemulsification of the lens nucleus. Aspiration can be achieved through either right or left paracentesis allowing access to all areas of the capsule. The 157400 is connected to the aspiration line of the phaco machine via the proximal male luer connector of the handpiece. Irrigation is achieved via the 157500 handpiece which is connected to the irrigating tube of the phaco machine.

157400 Aspirating Handpiece
22G Thin Wall
0.38mm Side Port

157500 Irrigating Handpiece
22G Thin Wall
0.50mm End Port

Lens Extraction

Lens Extraction Vectis

Irrigating Vectis aid the removal of the lens nucleus while maintaining the anterior chamber depth. In some cases iris retraction may be necessary and the heart shaped vectis provides for this. Irrigation flow rates and volume of irrigant are increased when the double holed vectis is used.

1619 25G Irrigating Vectis, Single-Holed
0.50mm

For lifting out the lens nucleus after it has been dislocated into the anterior chamber and for looping out large cortical debris. Chamber depth is maintained by irrigation through the vectis.

1619A 25G Irrigating Vectis, Double-Holed
0.50mm

As code 1619 but giving an extra flow.

Capsule Polishers

Posterior Capsule Polishers

The posterior capsule may be prepared for lens implantation using one of our carefully designed polishers. Silicone tipped plus Olive tipped and roughened tips are all available for polishing and cleaning any remaining cortex from the capsule bag.

1587 27G Silicone Tipped Polisher

0.40mm

For posterior capsule polishing. Also suitable for lens positioning.

1588 23G Olive Tipped Cannula (Curved)

0.64mm

Smooth tip for capsule polishing procedures.

1589 23G Olive Tipped Polisher (Curved with roughened tip)

0.64mm

For capsule polishing procedures.

1604 21G Posterior Capsule Polisher

0.30mm Port

0.80mm

Angled 0.30mm port Cannula with sand blasted tip.

1604A 23G Posterior Capsule Polisher

0.30mm Port

0.64mm

Angled 0.30mm port Cannula with sand blasted tip.

1614 21G Irrigating Capsule Polisher (Angled)

0.80mm

Has a roughened surface beyond the heel of the angled tip for polishing the capsule.

1645 23G Posterior Capsule Scraper (Simcoe)

0.64mm

With sand blasted end for scraping cortical debris.

Retractors

Iris Retraction & Cortex Removal

When the pupil is restricted iris retraction may be helpful to aid capsular bag visualisation for ease of residual cortex aspiration.

1287 30G Irrigating Iris Hook
0.30mm

1287A 25G I/A 'U' Shaped Cannula
0.50 x 22mm (25g x 7/8")

Quantity | Packaging for sterile - 10 per box

Oculoplastic Intubation Sets

Designed for nasal bicanalicular intubation, the Steriseal DCR (Dacryocystorhinostomy) products have smooth atraumatic connections between the silicone tubing and flexible metal alloy probes.

1292 Nasolacrimal Intubation Set - Adult (Bernard)

Used for adult nasolacrimal intubation.
Two malleable metal-alloy probes attached to hollow silicone tubing.
Probes - 21g (0.80mm) 80mm long.
Tubing - 0.64mm diameter x 260mm long.

1293 Nasolacrimal Intubation Set - Paediatric (Bernard)

Used for paediatric intubations.
Two malleable metal-alloy probes attached to hollow silicone tubing.
Probes - 22G (0.70mm) 55mm long.
Tubing - 0.64mm diameter x 300mm long.

Oculoplastic Lacrimal Cannula

Steriseal lacrimal cannula combine strength and flexibility during probing procedures.

1276 26G Lacrimal Cannula

0.45 x 30mm (26G x 1¹/₄")

A malleable, fine-gauge cannula for probing and irrigating lacrimal ducts.

1615 21G Lacrimal Cannula (Curved)

0.80mm

A curved probing cannula having a bulb end effect near the distal end for probing and irrigating lacrimal ducts.

1276A 25G Lacrimal Cannula

0.50 x 25mm (25G x 1")

1276C 25G Lacrimal Cannula

0.50 x 12mm (25G x 1/2")

1276D 25G Paediatric Lacrimal Flush
Cannula

0.50 x 12mm (25G x 1/2")

25G cannula attached to 150mm polypropylene tubing for remote irrigation.

Refractive Lasik Irrigating Cannula

Used to wash away particulates from both the flap and stroma bed.

1282 25G Lasik Irrigating Spatula

0.50mm

Ideal for flushing the corneal flap after laser assisted in-situ keratomileusis.

1592 30G R K Irrigator Cannula

0.30mm

For reliable irrigation flow while making radial incisions during Radial Keratotomy. Also useful for hydrodissection

171273 23G Lasik Cannula 3 Port

0.64mm

Has closed end and 3 ports.

171282A 25G Lasik Irrigating Spatula

0.40mm

Ideal for flushing the corneal flap after laser assisted in-situ keratomileusis.

171270 25G Lasik Spatula 4 Port

0.50mm

Has flattened spatulated tip for easy insertion under the flap.

171272 25G Lasik Irrigating Cannula

0.50mm

Thin spatulated open end tip for easy insertion under the flap.

Quantity | Packaging for sterile - 10 per box

Vitreoretinal Subretinal Cannulae

Subretinal Fluid Drainage/Perfluorocarbon.
Used for the safe drainage of subretinal fluid.

1603B00 20G Subretinal Fluid
Cannula

6mm

Silicone sleeve extends 6mm beyond end.
5 per box.

1603E00 20G Subretinal Fluid Cannula
3mm (Curved)

Silicone sleeve extends 3mm beyond end. Curved
design allows easier entry into difficult to reach tears.
5 per box.

1603C00 20G Subretinal Fluid Cannula
6mm (Curved)

Silicone sleeve extends 6mm beyond end.
Curved design allows easier entry into difficult
to reach tears.
5 per box.

1603F00 26G Perfluorocarbon
Coaxial I/A Cannula

0.4mm

Aspiration port on 20g sleeve.
5 per box.

1603D00 20G Subretinal Fluid Cannula

3mm

Silicone sleeve extends 3mm beyond end.
5 per box.
